- positioning for deeply indented dtds (ie not in iv_mainPane)

- I noticed one oddity when using the +/-: I added 2 list items to
  listfragment and i only filled in linktitle and description. i
  checked it in, then checked it back out. now when i add more list
  items using +/- , it only adds linktitle and description, not the 4
  fields that should be there. do you know what might be going on? i
  can show you on Monday if this description is cryptic...

- CheckoutForView (like checkout without lock)
  implement checkoutForView which is a GET without lock token
  flag on fragment, iv_readOnly = false;
  from either active list or search can do a getForView
  - put into edit window (right side) without being able to modify
    disable the checkin button for read only fragments
  - title bar include READ only "-- Read only --"
  [weird cases:
    [1 viewing fragment, now want to check it out, can't easily do it]
    [2 if viewing fragment, then search and do a checkout, it will just go
      to existing fragment, which is still in read mode]
    [3 test... with new icons]
  ]

- Logout... prompt to unlock all checked out fragments or keep for editing
  choose which to save locally
  offline editing: dtd, save xml file, multimedia file, locktoken
  on login fill in right side with locally saved fragments
  1. unlock unwanted fragments.
  2. save dtd & xml & multimedia files

- offline editing without checking into server. use local dtds.

- stale sessionID put up dialog for every SC_UNAUTHORIZED

- show media file for browseLocal (eg, image) on browseLocal entry

- publish info has 3 children: stylesheet is not properly indented

- copy and create

- search nresults print, results in message pane

- captitalize font (and smaller) for table headings...

- (tag1 | tag2)* method hasQualifier doesnt find model with () groupings

- chuck button for audio fragment, checkOutForView

- change login init file name ie "franklin_init.xml" -> "/login"
